H2 - Bolt x 6

H3 - Spring Washer x 6

H4 - Flat Washer x 6

H5 - Hex Tool x 1

H6 - Machine Screw x 4

H7 - Handles x 2

H8 - Furniture Anti -
Tipping Restraint x 1

PARTS

P1 - Upper Cabinet

P2 - Draw er Base

- A) Clear the area where the Sleep Chest will be placed. Everything listed above is packed inside the cabinet.
- B) Lay a blanket in front of the Upper Cabinet (P1). Open the flip top, undo the inner sliding bolts on either side and unlatch the safety chain. Lower the front door onto the blanket. Remove the contents: Drawer base (P2) & tri-fold mattress (P3).
- C) You will find the remaining hardware inside the drawer base (P2).
- D) Place the drawer base (P2) on the floor where the cabinet will sit.
- E) Remove wrapping from the mattress, face sharp edges away from the mattress. Set it aside for now.
- F)* Attach 2 handles (H7) on the front door using the machine screw (H6). Both doors have holes for the screws, attach it through the second door, the hole is large enough for the screw to pass through.
- G)* Put the 4 dowels (H1) in the dowel holes in the sides of the drawer base, as shown in the illustration. There are 10 holes, do not use the 6 holes with metal inserts.
- H) With two people (one on each end), lift and position the upper cabinet (P1) on the base. Line up the dowels. Be sure the cabinet is well seated. Use Caution and keep fingers from between parts when seating.
- I)* Use the hex tool (H5) to secure the upper cabinet (P1) to the drawer base (P2) with the six bolts (H2), spring washer (H3) and flat washer (H4) as shown in the illustration.
- J) Insert the mattress (P3) into the upper cabinet (P1), you may need to adjust the cover as it expands.
- K) URGENT SAFETY NOTICE: Connect the Anti - Tip Restraint to the wall.

Never attempt to move the Sleep Chest while the drawer base is attached to the bottom. The drawer can sag or pull causing the glide rails to warp.

Leveler Feet

Your Sleep Chest has adjustable feet in all 4 corners, this allows you to adjust for thicker floor surfaces and uneven floors, to allow the drawer mechanism to operate smoothly and efficiently.

Adjust the levelers (S1) to the depth of the carpet, or leave in all the way for hard surfaces, in order for the drawer glides to work properly.

If front door is not sitting square to cabinet sides, then the sleep chest is sitting unlevelled, fix this by adjusting the levelers.

Tip: Using a leveler is the best way to ensure the Sleep Chest is sitting correctly.

IMPORTANT! - HOW TO USE:

- Step 1** - Pull the drawer from the centre, until it fully extends, this supports the fold out door.
- Step 2** - Open the flip top, unlatch the side bolts on either side, and unlatch the security chain. Stand to the side and lower the front panel onto the drawer base.
- Step 3** - Flip up the legs on the folding door, make sure the leg hinges lock.
- Step 4** - Open the fold out door, placing the legs on the floor.
- Step 5** - Pull out the mattress.

CAUTION: DO NOT ALLOW YOUNG CHILDREN TO OPERATE THE SLEEP CHEST BED.

Always use the safety latch chain and be sure the inner side bolts are fastened when the cabinet is in the closed position.
